The Kikori Project: Science underpinning community-led conservation and environmental education in the Kikori Delta, PNG.

Thursday 16 May 2013, 1pm

Dr Arthur Georges, Professor in Applied Ecology, University of Canberra

Gould Seminar Room, (Rm 235) Gould Building (Bldg. 116), Linnaeus Way, ANU

Times are changing in the Kikori. Human populations are increasing, people have moved their settlements closer to the river, modern technologies are changing hunting practices, and new found wealth from industry are changing the impact on local resources. Arthur and his team are bringing science to the table to assist the Kikori community to better formulate and meet its goals for sustainability of an important food resource and flagship species, the pig-nosed turtle, *Carettochelys insculpta*.
